CIA 1 Theory - SET A

Name: Gutta Nihitha

Class: 5BICSAIMLA

Reg.No.: 2463021

Q1.) JavaScript code can be run directly inside a browser without needing a separate — step before execution.

Ans. Compilation.

Q2.) Write a program to declare a variable 'price' with value 250, then increase it by 50 and print the new value.

Ans.

```
let price = 250;
price = price + 50;
console.log(price);
```

Q3.) The value 'undefined' in JavaScript indicates that a variable has been declared but not —.

Ans. assigned a value

Q4.) Write a program to check if two numbers are equal using both == and ===, and print both results.

Ans.

```
let a = 20;
let b = 30;
console.log(a == b);
console.log(a === b);
```

Q5.) A function that is defined without a name and assigned to a variable is called a — function.

Ans. Anonymous

CIA1-PRACTICAL(SET 1)

CIA 1 practical - set 1

Name: Guke Nihitha

Reg.No: 2463021

Class: SBTC/AINLA

Task 1 : Student Record System - Welcome Message.

```
console.log("Welcome to Student Record System");
```

Output - node Task1.js

Welcome to Student Record system.

Task 2 : Student Record System - Declare and Update Variables.

```
let SystemName = "Student Record System";
```

```
let totalStudents = 100;
```

```
console.log(SystemName);
```

```
console.log(totalStudents);
```

Output - Student Record System

100

Task 3 : Student Record System - Identity Datatypes

```
let marks = 87;
```

```
let studentName = "krish";
```

```
let isPassed = true;
```

```
console.log(typeof marks);
```

```
console.log(typeof studentName);
```

```
console.log(typeof isPassed);
```

Output - number

string

boolean.

Task 4: Student Record system - Perform a calculation

```
let student1 = 86;  
let student2 = 94;  
let student3 = 72;  
let average = (student1 + student2 + student3) / 3;  
console.log("Average Marks:", average);
```

Output: Average Marks: 84.

Task 5: Student Record system - classify a Record.

```
let marks = 72;  
if (marks >= 35) {  
    console.log("Passed");  
}  
else {  
    console.log("Failed");  
}
```

Output: Passed.

Task 6: Student Record system - Iterate over Records.

```
let students = [  
    {name: "Asha", marks: 83},  
    {name: "John", marks: 93},  
    {name: "Priya", marks: 77},  
    {name: "Kiran", marks: 64},  
    {name: "Ravi", marks: 86}  
];
```

```
for (let student of students) {  
    console.log(student.name, student.marks);  
}
```

Output:

Asha	83
John	93
Priya	77
Kiran	64
Ravi	86

Task 10: Student Record System - create and print an object.

```
let student = {  
  id: 101,  
  name: "John",  
  age: 20,  
  course: "AIML",  
  marks: 88  
};
```

Output -

```
101  
John  
20  
AIML  
88
```

```
console.log(student.id);  
console.log(student.name);  
console.log(student.age);  
console.log(student.course);  
console.log(student.marks);
```

Task 11: Student Record System - calculate a Desired value.

```
function checkResult(name, marks){
```

```
  if (marks >= 85){  
    return "Pass";
```

```
  } else {  
    return "Fail";
```

```
  }  
}  
console.log(checkResult("Mary", 28));
```

Output -

Fail.

Task 14: Student Record System - Track a date.

```
let admissionDate = new Date("2026-07-24");  
console.log(admissionDate);
```

Output - 2026-07-24T00:00:00.000Z

Task 15: Student Record System - Apply a Math Method.

```
let average = 84.67;  
console.log(Math.round(average));
```

Output - 85
